EXECUTIVE SUMMARY

Results-driven **Senior Infrastructure, Storage & Systems Security Engineer** with 12+ years of enterprise experience directing mission-critical compute, enterprise SAN/NAS storage, hybrid cloud, and Linux/Windows environments. Proven track record managing and deploying zero-day security updates to **21,000+ endpoints worldwide** across global defense medical networks, architecting high-availability storage and disaster recovery workflows at Dell Technologies and Rolls-Royce, and engineering automated triage pipelines in Python, PowerShell, and Bash. Expert at bridging core system administration with modern cybersecurity governance (NIST CSF, CVE remediation) and automated infrastructure reliability.

TECHNICAL CAPABILITIES & DOMAIN MATRIX

Operating Systems & Linux:	Red Hat Enterprise Linux (RHEL 8/9), Ubuntu Server, CentOS, Debian, Windows Server (2012–2025), Bash scripting, systemd, PAM/SSH hardening, kernel tuning.
Enterprise Storage & DR:	Enterprise SAN & NAS, Dell EMC PowerEdge/PowerStore, NetApp, iSCSI, Fibre Channel (FC), LUN mapping & masking, RAID, Disaster Recovery planning, snapshot lifecycle & backups.
Security & Compliance:	Vulnerability remediation (CVE triage), NIST CSF, Zero-Day patch management (WSUS/SCCM), Cisco ASA, Firewalls, VPN tunnels, SSL/TLS certificates, RSA MFA, Defense Healthcare Compliance (HIPAA, STIGs).
Virtualization & Cloud:	VMware vSphere / ESXi (7.0/8.0), vCenter, Hyper-V, Proxmox, Azure Cloud, Active Directory, Entra ID (Azure AD), Group Policy (GPO), PXE/OSD network boot architectures.
Automation & Scripting:	PowerShell 7.x, Python 3.12, Bash, Automated Task Sequences, Event Log & Sysmon telemetry, REST APIs, Git, Service Watchdogs.

PROFESSIONAL EXPERIENCE

Senior Infrastructure & Storage Systems Engineer | Dell Technologies — July 2019 – Present

- Direct multi-tiered system infrastructure, server health monitoring, and enterprise storage arrays across distributed production environments.
- Formulate and execute SAN/NAS storage upgrade strategies, volume provisioning, and automated file-restoration protocols to eliminate data loss risks.

- Manage critical incident response and root-cause analysis (RCA) for complex operating system, hypervisor, and storage hardware failures, maintaining >99.99% uptime.
- Supervise and execute routine security patch management, OS kernel updates, and enterprise security controls across Windows Server and Linux environments.
- Partner with networking and hardware architecture teams to install, configure, and maintain mission-critical enterprise compute and storage hardware.

Sr. Infrastructure Engineer / Data Center Lead | Army Medical Treatment Facilities Worldwide — Nov 2016 – June 2019

- Architected and commanded enterprise-wide software updates and security patch deployments via SCCM/MECM and WSUS across **21,000+ endpoints worldwide**.
- Diagnosed and rectified Operating System Deployment (OSD) and PXE broadcast routing challenges across multi-site military healthcare treatment facilities.
- Engineered automated task sequences and application packages for core medical software and third-party vendor distributions.
- Significantly elevated defense security preparedness by replacing slow third-party patching tools with automated SCCM patching, saving hundreds of thousands in licensing fees while accelerating zero-day remediation.
- Mentored and cross-trained junior administrators in log triage, remote client troubleshooting, and deployment workflows.

Sr. IT Infrastructure Engineer & Project Manager | Rolls-Royce — June 2014 – March 2017

- Maintained and administered an 80–90% virtualized corporate infrastructure across Azure, Rackspace, and on-premises VMware ESXi hypervisors.
- Directed core enterprise identity services, Active Directory multi-forest trees, Exchange clusters, and RSA multi-factor authentication (MFA) token infrastructures.
- Ensured continuous high availability of enterprise database and storage tiers supporting DB2, Microsoft SQL Server, Oracle DB, and MySQL.
- Spearheaded Tier-4 engineering escalations across corporate data networks, unified communications, and remote site VPN connectivity.

Data Center Solutions & Security Lead | Digital Realty Trust / Allied Barton — 2013 – 2014

- Maintained physical and environmental security compliance across hyper-scale multi-tenant colocation data center facilities.
- Monitored critical facility telemetry including Power Distribution Units (PDUs), UPS battery banks, and biometric access controls.

ENGINEERED SYSTEMS & SECURITY PROJECTS

- **VulnGuard (Automated Vulnerability & CVE Scanner):** Developed automated security scanning engine that audits installed system packages against National Vulnerability Database (NVD) CVE feeds to deliver remediation priority scorecards.
- **Automated Infrastructure Watchdogs:** Built headless Windows and Linux daemon services in Python/PowerShell for automated disk-threshold alerting, service health pings, and incident self-healing.

- **Enterprise Portfolio & Rate Valuation Suite (34 Projects):** Engineered a full-stack technical portfolio showcasing cybersecurity tools, AI automation workflows, and compensation models.

CERTIFICATIONS & CONTINUING EDUCATION

CompTIA Security+ (SY0-701) (In-flight / Exam Prepared) • **Red Hat Certified System Administrator (RHCSA EX200)** (In-flight / Exam Prepared) • **ITIL Foundation** • **ISO Standards Training** • **NASA Ground Control Mission Operations Simulation Honors**
